SUMMARY

Lead Full Stack Software Engineer with 3+ years building secure, cloud native insurance quoting systems serving 600K+ monthly transactions and contributing to \$3M in annual savings. AWS Certified with hands on experience across Angular, Java and Spring, AWS, automated testing, delivery pipelines, security maintenance, and production observability.

EXPERIENCE

State Farm | Lead Software Engineer, Full Stack

June 2023 - Present | Remote

- Drive full stack development for an insurance quoting platform using Angular and Java/Spring, serving 600K+ monthly quote transactions across 20 states.
- Improved dependency security by upgrading the application from Angular 18 to Angular 19, validating compatibility and helping partner teams plan adoption.
- Designed a secure identifier flow that preserves downstream contracts without displaying sensitive values in the interface.
- Coordinated a connected feature across four codebases, including interface, service, rules, configuration, automated testing, reviews, and release validation.
- Reduced tracked sales flow latency from 58.75s to 29.08s, a 50.51% improvement, through real user monitoring and application and API profiling.
- Shipped converter hoisting, safe caching, in flight request deduplication, and no change update skipping; reduced Vehicle Detail latency 66.43% and Review Quote latency 24.3%.
- Consolidated seven automated acceptance scenarios into three focused checks while preserving the intended validation and reducing maintenance.
- Own merge requests, delivery validation, production releases, code reviews, and incident triage while mentoring engineering interns through onboarding and sprint work.

PROJECTS

Isotara | Chemistry Roguelike Deckbuilder

2026 - Present

Godot, GDScript, game systems | Personal project

- Building a chemistry themed roguelike deckbuilder with modular card effects, procedural encounters, upgrade paths, and replayable run progression.
- Designed reusable effect modules and rapid prototypes so new cards and encounters can grow without one off rule piles.

PredictChain | Decentralized Model Marketplace

2023

Python, Algorand, ML pipelines | arxiv.org/abs/2307.15168

- Co designed a blockchain marketplace for dataset provenance, training requests, model queries, and participating compute nodes; presented at ChainScience 2023.
- Won 1st Place and Most Innovative Technology at the 2023 MEGA ACE Hackathon at RPI.

SKILLS

Languages: TypeScript, JavaScript, Java, Python, C/C++, SQL, HTML/CSS

Frameworks: Angular, Spring and Spring Boot, React, Node.js, Django, Godot

Cloud and delivery: AWS, Docker, Kubernetes, Terraform, GitLab CI/CD, secure SDLC

Quality and data: Automated testing, Dynatrace RUM, Splunk, behavior analytics, REST APIs

EDUCATION AND CERTIFICATION

Rensselaer Polytechnic Institute

AWS Certified Cloud Practitioner

B.S. Computer Science, minors in Management and Media and Culture, 2023

James A. Voorhies '20 Scholar
